

What Every Mother Should Know About Baby Mattresses

Baby mattresses are traditionally made from Polyurethane Foam (PU Foam) or Innerspring Coils (Spring Mattress). Babysafe® brings you mattresses made from 100% Natural Latex. Here's why Babysafe mattresses make the difference...

Babysafe® latex is natural

- **Natural latex** is safe and contains no toxic substance and emits no fumes. Being anti-allergenic, anti-bacterial, mold-free, dust-free, and dust mite-free makes it safe for the respiratory system.
- **PU Foam**, made from petro-chemicals, does not naturally resist bacteria, mold, mildew, fungus and dust mites.
- **Spring mattress** is made of innerspring coils, usually padded or stuffed with PU foam or polyester fibre for cushion. These stuffing can be a home for bacteria, mold, mildew, fungus and dust mites.

Babysafe® latex is resilient

- **Natural Latex** gives good support, cushions uniformly, does not sag, and has no fluff or depression. Flat and firm, it resumes shape immediately.
- **PU Foam** is usually inflexible and light, it may not meet baby's need for comfort or support. It eventually sags and creates permanent body impressions.
- **Spring mattress** must be turned over regularly to prevent sagging and body indentations.

Babysafe® is even more comfortable

- **Natural Latex** resists moisture, making it cooler and more comfortable to sleep on. The pincore holes and millions of breathable tiny air holes effectively ventilate body heat and humidity.
- **PU Foam** tends to absorb & hold body heat and can result in a hot, sweaty sleeping experience.
- **Spring mattress** is not washable and with repeated wetting and soiling, the innerspring coils might get rusty and be damaged over time. The polyester fibre padding blocks air flow and can also create a hot, sweaty sleeping experience.

Babysafe® is much more

- It's durable and easy to care.
- It comes with high quality 100% cotton coverings, allowing moisture to permeate and escape instead of trapping it. Our coverings are removable for easy laundering.

- Its pincore holes soften the latex and make it even more comfortable. While bigger holes make the mattresses softer and are more economical to produce, Babysafe latex offers just the right size, hence maintaining the firmness that babies need.

Babysafe® also produces pillows, bolsters and baby accessories, all in Natural Latex.

Available at Robinsons, Takashimaya, all Kiddy Palace outlets and Mothers Work.
